

Standard Operating Procedure

Reduction in Consented Discharge :-

The industrial units which are proposed to reduce the discharge to the earlier consented flow by the State Board. The procedure shall be as below:-

- The unit shall submit all the relevant documents with regard to change in and verification of the current flow/ technology up-gradation to the Regional Officer of the State Board.
- Concerned Regional Officer shall examine the case as submitted by the unit, checking all the documents and then ensure the inspection of the unit.
- Inspection shall be carried out to verify all the required compliances made by the unit and the equipment installed to bring down effluent discharge.
- Representative of the unit shall remain present during the inspection.
- If the consent is granted by Regional Officer of the State Board then RO shall process the application after ensuring all the statutory compliances made by the unit.
- If the consent is granted at Head Office level then Regional Officer shall submit clear cut recommendations in the matter along with the detailed inspection report and all the supporting documents/technological up-gradation authenticating the reduction of the flow of the unit.
- The RO/HO will process the case for reduction of consent discharge and issue the corrigendum if there is change in the consent discharge volume.
